

DUAL MOMENTUM SYSTEMS

**Process driven investment decisions
driving better long term results with more
shallow drawdowns and better risk
adjusted performance.**

Disclosure

Nothing in this report should be construed as investment advice, an offer, recommendation, or solicitation to buy or sell any investment. All investing involves risk, including the possible loss of money you invest, and past performance does not guarantee future performance.

Fair Use

The investment strategies and their investment selections presented within this report are free for your personal use, noting the disclosure above. These strategies are not allowed to be used by any CFA, CFP, RIA, CPA, CLU, CHFC, IAFP, NAPFA, PFS or any other investment professional - please inquire for licensing.

What is Dual Momentum Investing?

- Dual Momentum strategies are evidence based, rules based, objective, tactical investment methodologies with the goal of maximizing participation in upside market momentum and sidestepping long market downturns by going into Treasuries until the markets are again in an upward trending.

- Dual Momentum investing has two primary components. The first is absolute momentum: is there positive return over your look back period? The second momentum is relative momentum: which investment option has the highest return over the look back period. If there is positive momentum then we invest in the highest relative momentum option, otherwise we stay out of harm's way in Treasuries which tend to perform well when the markets are underperforming.

- Smart Leverage is now a part of these strategies in order to take advantage after outsized losses in the markets. These strategies are in leveraged equities about 10% to 15% of the time on average which is about 4 months every 3 years.

- Why use Dual Momentum Strategies? Most professional managers fail to beat the market indices over time and retail investors do even worse. Buy and Hold investors can match the indices performance but have to suffer tremendous drawdowns along the way. For these reasons I use these Dual Momentum strategies for my investing. You will rarely get out of equities at the very top, and back in at the very bottom, but there are incredible improvements, as the pages that follow will illustrate.

- Is Dual Momentum easy to invest in? Investing in Dual Momentum strategies can take some getting used to, you will experience whipsaw in choppy markets, there may be a change of investment at the end of any given month, the strategy may dictate you be fully invested at a time when you may otherwise not be, it can be hard to reconcile when your investments are performing different than the overall market, there will be periods of a year or longer when you underperform the overall market. However, you are paid off with less drawdowns and far better overall returns over the long run.

For April, here are the investments by strategy:

Triad

May invest 1/3 into each of: Russell 1000 & Russell MidCap Value, and 1/6th into Gold. Otherwise into the best of: Short Term Investment Grade Bonds, Short Term Treasuries, or Intermediate Term Treasuries.

For the month of April 2022 invest In: 1/6 SGOL 2/6 IWS 3/6 VGSH

IWB = Russell 1000, IWS = Russell MidCap Value, SGOL = Gold

VGSH = Short Term Treasuries, VGIT = Intermediate Term Treasuries, VCSH = Short Term Investment Grade Corporate Bonds

Triad+

May invest 1/3 into each of: Russell 1000 & Russell MidCap Value, and 1/6th into Gold. Otherwise into the best of: Short Term Investment Grade Bonds, Short Term Treasuries, or Intermediate Term Treasuries. + Smart Leverage

For the month of April 2022 invest In: 1/6 SGOL 2/6 IWS 3/6 VGSH

IWB = Russell 1000 [SSO 2X S&P 500], IWS = Russell MidCap Value, SGOL = Gold

VGSH = Short Term Treasuries, VGIT = Intermediate Term Treasuries, VCSH = Short Term Investment Grade Corporate Bonds

Global Navigator

Invests in US or Foreign, with limited Smart Leverage in USA only, Long Term Treasuries when markets are going down

For the month of April 2022 invest in: [VTI] Total US Market

The Russell OG

Goes into either Russell: 1000, MidCap Growth, or Russell MidCap Value, Long Term Treasuries when markets are going down

For the month of April 2022 invest In: [IWS] Russell Mid-Cap Value

LT Gain 2X

Invests into the Russell: 1000 with positive momentum, with Smart Leverage into 2X S&P 500, Long Term Treasuries when markets are going down

For the month of April 2022 invest In: [IWB] Russell 1000

LT Gain 3X

Invests into the Russell: 1000 with positive momentum, with Smart Leverage into 3X S&P 500, Extended Duration Treasuries when markets are going down

For the month of April 2022 invest In: [IWB] Russell 1000

MAX PAIN

Invests in 3X leveraged versions of Russell 2000, S&P MidCap 400, or S&P 500, 3X Intermediate Treasuries when markets are going down

For the month of April 2022 invest In: [UPRO] 3X S&P 500

Strategy Fact Sheets

Dual Momentum Strategies: Triad

US Markets and Gold Rotational Strategy with multiple out of market options

Results through 03/31/2022

Investment selection for April 2022:

1/6 SGOL 2/6 IWS 3/6 VGSH

Tax friendliness:

Triad is very tax friendly, mostly Long Term Cap Gains.

Months between change of holdings

Triad has a change to one of it's holdings every 2.13 months on average.

Portfolio size appropriateness:

Whale, Triad can be used for any sized portfolio.

Triad Characteristics

Drawdowns: Triad has more conservative drawdowns than a Balanced 60/40 strategy

Volatility: Triad is noticeably less volatile than a Balanced 60/40 approach

Returns: Triad has similar historical returns depending on the time frame, and should do better going forward.

Strategy Description:

Triad was created as a better option than a Balanced 60% Stock and 40% Bond portfolio. The 50 year bond bull market looks to be ending, Instead of just going into aggregate bonds, Short Term Treasuries, Intermediate Term Treasuries, and Short Term Corporate Investment Grade Bonds are evaluated selecting the best option. Triad has an average equity allocation of 59%, and a maximum equity allocation of 83%. This strategy never uses any leverage.

Strategy Components

IWB Russell 1000, IWS Rusell MidCap Value, SGOL Gold
VCSH Short Term Corporate Investment Grade Bonds
VGSH Short Term Treasuries
VGIT Intermediate Term Treasuries

US Markets and Gold Rotational Strategy with multiple out of market options

Results through 03/31/2022

Investment selection for April 2022:

1/6 SGOL 2/6 IWS 3/6 VGSH

Tax friendliness:

Triad+ is very tax friendly, mostly Long Term Cap Gains.

Months between change of holdings

Triad has a change to one of it's holdings every 2.13 months on average.

Portfolio size appropriateness:

Whale, Triad can be used for any sized portfolio.

Triad Characteristics

Drawdowns: Triad has more conservative drawdowns than a Balanced 60/40 strategy

Volatility: Triad is noticeably less volatile than a Balanced 60/40 approach

Returns: Triad has similar historical returns depending on the time frame, and should do better going forward.

Strategy Description:

Triad+ was created as a better option than a 60% Stock and 40% Bond portfolio. Instead of aggregate bonds, Short Term Treasuries, Intermediate Term Treasuries, & Short Term Corporate Investment Grade Bonds are evaluated selecting the best option. Triad+ uses limited Smart Leverage for the IWB portion of the strategy and has an average equity allocation of 67%, and a maximum equity allocation of 117%. There are significant improvements for a very modest use of leverage in what is still a conservative strategy.

Dual Momentum Strategies: The Russell OG

USA Momentum Rotational

Results through 03/31/2022

Investment selection for April 2022:

IWS, Russell Mid-Cap Value

Tax friendliness:

The Russell OG has mostly Short Term Cap Gains.

Months between change of holdings

The Russell OG changes it's holdings every 3.3 months on average.

Portfolio size appropriateness:

Whale, The Russell OG can be used for any sized portfolio.

The Russell OG Characteristics

Drawdowns: The Russell OG has more conservative drawdowns than the S&P.

Volatility: The Russell OG is usually less volatile than the S&P over time.

Returns: The Russell OG has much better historical returns compared to the S&P 500.

Strategy Description:

The Russell OG invests in the United States, going into the best performer of the Russell 1000, Russell MidCap Growth, or Russell MidCap Value. When these markets aren't experiencing positive momentum the strategy goes into Long Term Treasuries. The Russell OG has an average leverage of 100%, and a maximum leverage of 100% (meaning no leverage at all, 100% being the nominal position.)

Global Momentum Rotational Strategy using Smart Leverage

Results through 03/31/2022

Investment selection for April 2022:

VTI, Total US Market

Tax friendliness:

Global Navigator has mostly Short Term Cap Gains.

Months between change of holdings

Global Navigator changes it's holdings every 4 months on average.

Portfolio size appropriateness:

Whale, **Global Navigator** can be used for any sized portfolio.

Global Navigator Characteristics

Drawdowns: **Global Navigator** has more conservative drawdowns than the S&P.

Volatility: **Global Navigator** is usually less volatile than the S&P over time.

Returns: **Global Navigator** has superior historical returns compared to the S&P 500.

Strategy Description:

Global Navigator is a global strategy, investing in the USA when it is outperforming, and in Foreign markets when they outperform. This strategy uses Smart Leverage, after an outsized drawdown in the markets, could go into 2X Leveraged equities if the USA Markets are the investment, not if going into Foreign Markets. When it goes into 2X leveraged position, it holds it until there is a natural change of investment by the strategy. The strategy holds long term treasuries when out of equities. The average leverage amount is 109%, and the maximum leverage is 200%.

Drawdowns: MAX PAIN has frequent and larger drawdowns than the S&P.

Volatility: MAX PAIN is far more volatile than the S&P over time.

Returns: MAX PAIN has incredibly huge historical returns compared to the S&P 500.

Strategy Description:

MAX PAIN invests in the United States, going into the 3X leveraged version of the best performer of the Russell 1000, Russell MidCap Growth, or Russell Small Cap. When these markets aren't experiencing positive momentum the strategy goes into 3X Long Term Treasuries. This is an extremely high return strategy with equally high volatility and frequent drawdowns, know what you're getting into. MAX PAIN has an average leverage of 258% and a maximum leverage of 300%.

Strategy Components

URTY 3X Russell 2000, MIDU 3X S&P MidCap 400, UPRO 3X S&P 500

TMF 3X Long Term Treasuries, 1st month in treasuries

EDV Extended Duration Treasuries, subsequent months in treasuries

Metrics, Annual Returns and Correlations

CAGR: Compound Annual Growth Rate, on average how much the strategy has returned per year

Ulcer Performance Index: A risk adjusted performance ratio which uses the Ulcer Index in it's calculations

Sortino Ratio: A risk adjusted performance ratio commonly used

Gain to Pain: Used by the famous Jack Schwager, simply the total net gain divided by net loses along the way

Maximum Drawdown: The largest negative drawdown for the strategy, on a month end basis

Ulcer Index: Measures how bad drawdowns are for an investment, not related to gains, just drawdowns

Sharpe Ratio: A commonly used risk adjusted performance measure, however, it penalizes for upside volatility

MAR Ratio: A risk adjusted performance ratio, uses maximum drawdown in it's calculations

"Long Term" Metrics Comparisons: Strategies vs S&P 500 1980 to current

All Metrics are calculated from Monthly returns

"Modern Era" Metrics Comparisons: Strategies vs S&P 500 & 60/40 2000 to current

All Metrics are calculated from Monthly returns

DUAL MOMENTUM SYSTEMS

Thank you for your time, my hope is that these strategies may help you grow your investments more than a market index fund, with less drawdowns along the way.

Countless hours of thought, development, and modeling have gone into these strategies which were inspired from the work of Gary Antonacci at www.OptimalMomentum.com. I have entrusted my invested net worth into these strategies, I am not looking to gain from anybody else who chooses to use them, I simply want to share what I think are fantastic ways to invest money for the long run. Receive the strategy information free by emailing me and getting on the distribution list, your information is kept private.

A handwritten signature in black ink, appearing to read "Randy".

DUAL MOMENTUM SYSTEMS

Appendix: How to invest in Dual Momentum and How it works

How would a person invest in these Strategies?

- At the end of the month notice of which investments the strategies should be invested in for the next month are distributed. You can make any necessary trades the first day or two of the month. This is a free service, these models are run for my own investment portfolio, I like to share with interested people who want more than a buy and hold strategy.

- Determine your allocation, you'll need to decide if you want to go with Global Navigator, The Russell, or some combination of both. In the reporting you'll see a "30/70 Model Portfolio", that is because this is what I do personally: 30% Global Navigator and 70% The Russell.

- Place your trade at your brokerage company so that you are in the investment that the ETF which the strategy indicates for the next month. There is no need to scale in when you start the strategies, every month is a new investment decision to be fully in equities or in Treasuries. You only need to make sure that you are holding the investment for the month that the models tell you to hold.

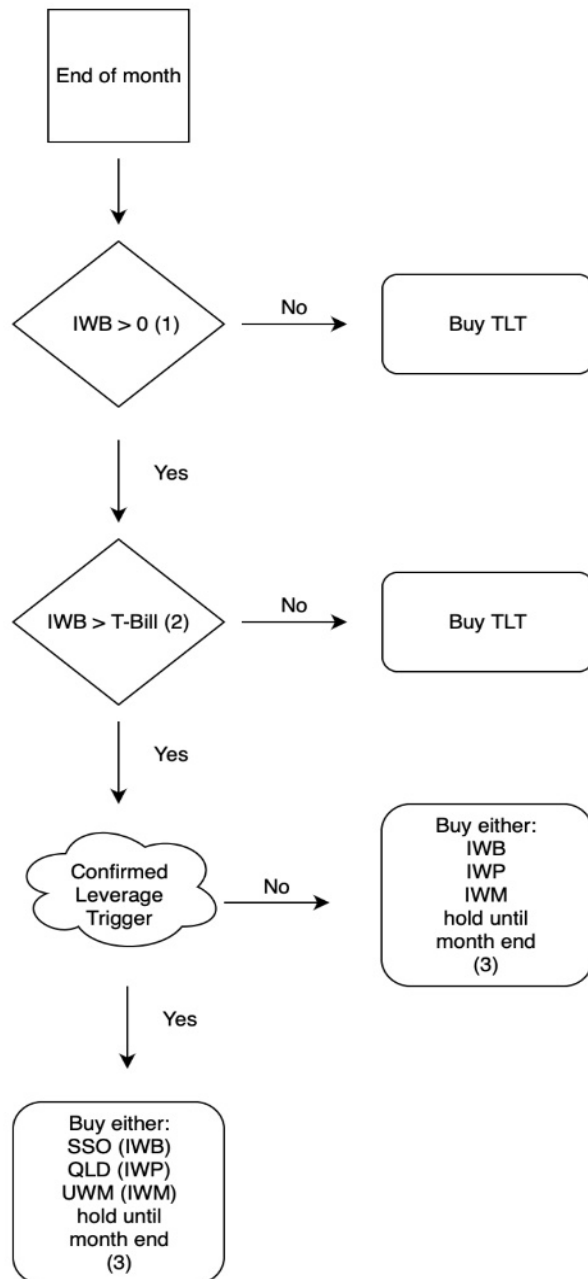

- When the models are in Risk OFF mode they are out of equities and in Treasuries. When in Risk OFF mode the models set to go into UST which is a 2X Intermediate Treasuries ETF. For most of us, this is a great choice. If you are a whale investor then you should probably be considering going into either ZROZ or EDV instead for maximum gain prospects, a whale could instead buy VGLT if they want less volatility when are out of equities.

- These strategies move differently than a market index fund, and on any given day, week, month, or year could underperform the market index, however, this does not mean that the strategies are no longer working - they are best evaluated over a longer time period. Please look closely at the annual performance compared to the S&P on the Bar Chart, it shows very clearly on an annual basis how great these strategies perform to the market, but not every year. Also look closely at the Maximum Drawdown chart, yes, there are some big dips on the dual momentum strategies, but the drawdowns are both more shallow and fewer in number than the market.

How do the strategies select where to invest?

This example to the left shows the decision process for **The Russell**.

Decision 1) When the month is over the full month results are used to calculate the weighted returns: 25% of the 1 month return plus 25% of the 3 month return plus 50% of the 6 month return. If the weighted return for the Russell 1000 is less than zero, then the strategy goes into Treasuries for the next month.

Decision 2) If the Russell 1000 weighted return was positive, check to see if the weighted return is greater than the 90 day T-Bill weighted return, if not the strategy goes into Treasuries for the next month.

Decision 3 No) If the Russell 1000 weighted return was higher than the 90 day T-Bill weighted return, do we have a confirmed Leverage Trigger (which can happen after an outsized drawdown in the Russell 1000), if not we invest in either the Russell 1000, Russell Mid-Cap Growth, or Russell 2000, the one of those three selected is the one with the highest relative strength determined by comparing their weighed returns.

Decision 3 Yes) If there was a confirmed Leverage Trigger, then we invest in SSO instead of Russell 1000, and QLD instead of Russell Mid-Cap Growth, and UWM instead of Russell 2000.

The investment is held until the end of the month, and the process is done again. On average, investments are held about 4 months before changing.

Extended Data & Out of Sample

Extended Data

The strategies use ETF monthly total return data. Leveraged ETF data is used as far back as it is available, it is simulated using the available daily return total data to extend the leverage returns back in time. At this time, only the leveraged S&P 500 from 1970 through 1979 had to be simulated on monthly data instead of daily, if that information becomes available to me it will be updated. This deck is reporting back to 1980 for all strategies, I do have Global Navigator and LT Gain 3X back to 1970 but as mentioned the extended data for the 1970's should be based on daily returns.

The Nasdaq 100 benchmark data is based on Nasdaq 100 back to 1986, however, it didn't exist or data can't be found before that time, so the Nasdaq Composite is used pre-1986 as a proxy. I couldn't reliably emulate Nasdaq 100 from Nasdaq comp.

In Sample, and Out of Sample

The strategies were created with available data from 2000 through the time each strategy was created. Because this data was available and used in the modeling of each strategy, it is considered "In Sample". "Out of Sample" is the periods that the strategy is looking at for which returns were not available when the strategies were created. 1980 through 2000, and from when the strategy was finalized forward is all out of sample.

Nothing was changed to any of the strategies after seeing the additional 20 years from 1980 through 2000, nor were any of the strategies changed or modified due to any returns which have resulted after the strategies were created. I use these strategies myself to invest my hard earned dollars in them, I don't want to fool anybody, most especially not myself by tweaking the strategies to handle some big incident better than it was originally designed to do, no data mining!
